PROFESSIONAL PROFILE

With over five years as a QA Engineer, I worked on frequent web and mobile releases in a logistics SaaS. To surface risks before production, I joined Product and Engineering at the requirements stage, prepared 90% of test plans before development, tested APIs and data, and helped migrate Cypress coverage to Playwright/TypeScript. About 25% of tested tasks were returned for fixes and retesting before release. I bring that early, evidence-driven approach to new teams.

TOOLS AND SKILLS

Test design: Plans, cases and test data based on user stories, acceptance criteria and risks; functional, exploratory, integration, regression and E2E testing; pull request reviews.

APIs and data: SQL/PostgreSQL for queries, test data, persistence and CRUD validation; Postman for REST APIs, contracts and error handling; DevTools and logs.

Automation: Playwright/TypeScript in production, Cypress and Appium; Selenium with Python/Pytest (training); Git, GitHub Actions, Jenkins, Docker and CI/CD.

Defects and incidents: Jira, Xray, TestRail; impact-based prioritization, log analysis, reproducible steps, evidence, tracking and retesting.

Coverage and debugging: Web and Android, targeted iOS validation; Android Studio, DevTools, Datadog and Google Cloud to reproduce and investigate failures.

Non-functional testing: k6/JMeter for performance, axe for accessibility in portfolio projects, and continuous improvement of QA processes.

Interpersonal: Clear communication, analytical judgment, initiative, autonomy, attention to detail, collaboration with Product and Engineering, and continuous learning.

PROFESSIONAL EXPERIENCE

QA Engineer
SimpliRoute | January 2021 – July 2026

- Analyzed requirements, user stories and acceptance criteria; prepared 90% of test plans before development to anticipate scenarios and risks.
- Designed, executed and maintained functional, integration, regression and exploratory tests for 3 to 6 features per week in a logistics SaaS product.
- Reviewed application behavior against pull request changes and underlying logic to find overlooked scenarios and guide testing.
- Tested APIs and integrations with Postman; used SQL/PostgreSQL to prepare data and validate persistence, CRUD operations and business rules.
- Validated web and mobile flows, reproduced Android issues and built a mobile automation suite with Appium; participated in targeted iOS validation.
- Investigated incidents and documented defects in Jira/Xray with reproducible evidence; about 25% of tested tasks were returned to Engineering for fixes and retesting.
- Automated flows with Cypress (2022–2023) and helped migrate coverage to Playwright/TypeScript in 2024, maintaining regression tests.
- Worked with Product and Engineering in Scrum to prioritize risks, refine coverage and improve QA processes; contributed performance tests with k6/JMeter.

FEATURED PROJECT

Agentic Quality Engineering Lab | github.com/imalisani/qa-agents-demo
Public lab with UI/API tests in Playwright/TypeScript, SQL validation, k6 performance tests, axe accessibility checks and Allure reports. I develop QA agents to review test plans and identify missing scenarios.

EDUCATION

Information Systems Engineering | National Technological University (UTN), Santa Fe | advanced student

PROFESSIONAL DEVELOPMENT

Playwright with TypeScript | Udemy | March 2023
Selenium with Python and Pytest | Free Range Testers | August 2026

LANGUAGES

Spanish: Native | English: B2+
